

# Inoculant quality control

The CRB-JD is registered in the Ministry of Agriculture, Livestock and Supply (MAPA) to perform inoculant quality analysis, following the Normative Instruction No. 30/2010 (SDA / MAPA). This rule establishes the official methods for inoculant analysis, cell counting, identification and purity analysis. All inoculants must have minimum quality standards for the Brazilian market. The service of inoculant analysis is provided to companies, institutions and other stakeholders by prior contact. The result of the analysis is presented in the form of certificate of analysis, sent electronically or by e-mail also if there is customer requires.

How to request analysis of the quality of inoculants?

1. Forward the request to [cnpab.crbjd.pedidos@embrapa.br](mailto:cnpab.crbjd.pedidos@embrapa.br)
2. Upon receipt of the request, we will contact you with information about the necessary documentation and costs.
3. At the time of shipment of the sample, consider dispatch instructions described below:
  - a) Pack up the samples in cardboard or styrofoam boxes (never add ice or moist paper towel).
  - b) Send the samples to CRB-JD as soon as possible in order to maintain their integrity. Avoid sending on Fridays, or the day prior to a public holiday, to minimize long-term storage under inadequate conditions over the weekend.
